SERVICE PACKAGE

The 30% IT Savings Program

A phased transformation program that restructures how your team builds and ships software — cutting IT resource needs by up to 30% through AI-native workflows.

WHO IT'S FOR

Companies with an existing dev team where delivery is slow, costly, or bottlenecked — and where leadership wants measurable savings, not another tool rollout.

WHAT'S INCLUDED

- ✓ Full stack and workflow audit (builds on the Diagnostic Sprint, or starts fresh)
- ✓ AI-native transformation roadmap tailored to your existing stack
- ✓ Hands-on implementation: restructuring dev workflows, introducing tools like Claude and Lovable where they fit, CI/CD and process changes
- ✓ Team training so the gains stick after the engagement ends
- ✓ Savings tracked against agreed KPIs: delivery time, manual work reduced, headcount avoided

Why it matters: This is the productized version of what Nicola has already delivered at Furness Insurance Services and CREA Assicurazioni — the offer with the strongest proof behind it.
