SERVICE PACKAGE

AI Enablement Training & Workshops

Practical, hands-on AI adoption training for technical and non-technical teams — not a generic AI seminar, but workflows they can use the next day.

WHO IT'S FOR

Teams that already have AI tools available but no real adoption — usage is scattered, inconsistent, or limited to a few power users.

WHAT'S INCLUDED

- ✓ Half-day or full-day hands-on workshops, in person or remote
- ✓ Tailored to your team's actual tools and workflows — AI-native development for engineering teams, or AI for daily operational work for business teams
- ✓ Optional multi-week cohort program for deeper adoption, with follow-up sessions to check real usage

Why it matters: Turns scattered, individual AI usage into a team-wide capability — the piece that makes the other programs stick long-term.
